

OWNER'S MANUAL

RAIMVOICE

Eve and Adam answer your business calls and texts around the clock, book real appointments, and hand you every conversation in plain English.

Version 1.0.2

Designed and created by **ECONTEUR LLC** · econteur.com

What's in here

- 1 What RAIMVOICE actually does
- 2 Setting up, start to finish
- 3 Today — your morning screen
- 4 Voice — the phone line, Eve and Adam
- 5 Inbox — texts and AI drafts
- 6 Calendar — appointments
- 7 Customers — who called and what it was worth
- 8 Settings — hours, voicemail, language, knowledge
- 9 Plans and usage
- 10 Your data and your customers' privacy
- 11 When something looks wrong
- 12 Getting help

READ THIS FIRST

Two things in RAIMVOICE are deliberately honest, and knowing them will save you confusion later. **Your AI never invents facts.** If a price, an opening time or a policy is not in the information you gave it, it says it will have you confirm rather than guessing. And **your AI always admits it is an AI** when a caller asks — on the phone it says so at the start of every call, because US law requires it.

1 • What RAIMVOICE actually does

You get a business phone number answered 24 hours a day by two AI agents — Eve and Adam — who talk to your customers, book them in, and tell you what happened.

The short version

- **They answer every call.** No voicemail, no hold music, no missed job because you were under a sink or with a client.
- **They book real appointments** against your real calendar and your real working hours — and only say "booked" when it actually is.
- **They handle texts too**, in one inbox, and tell you honestly when a message did not get delivered.
- **They return calls for you.** Ask an agent to call someone back and read the transcript afterwards.
- **They hand you the money story** — which calls turned into work, and what it was worth.

What they will never do

NEVER	WHY
Invent a price, an opening time, a discount or a guarantee	Everything they say comes from the information you gave them. If it is not there, they say so.
Pretend to be a human being	Asked if they are a real person or an AI, they answer plainly and keep helping.
Ask a caller for card numbers or passwords	Payment happens through a secure link you send, never spoken aloud on a call.
Give medical, legal or financial advice	They take the enquiry and pass it to you.
Handle an emergency themselves	A caller describing an emergency is told to hang up and call 911 or their local emergency number.

ONE THING TO KNOW UP FRONT

US carriers require every business to be registered before it can send text messages. **Calls work immediately.** **Texting switches on once that registration clears**, which takes the carriers a couple of weeks. It is not something any provider can speed up — it is a carrier process, not a software one.

2 · Setting up, start to finish

Everything happens inside the app. There is no website to visit, no form to email back, and no waiting on a setup call.

- 1 **Create your account.** Sign in with Apple, with Google, or with an email and password.
- 2 **Choose a plan.** Foundation, Rise, Reign or Legacy. Foundation starts with a free trial on iPhone. You can change or cancel any time from the App Store or Google Play — no phone call, no notice period.
- 3 **Tell us about your business.** Name, what you do, where you are, and your time zone. This is what Eve and Adam introduce themselves with.
- 4 **Add your services and prices.** This is the single most valuable ten minutes you will spend. Anything here, your AI can quote confidently. Anything missing, it has to defer to you.
- 5 **Set your business hours.** Used to decide what is "open", what is after-hours, and which times can actually be booked.
- 6 **Add your FAQs and policies.** Cancellations, deposits, call-out fees, parking, which brands you work on. Every one of these is a question your AI can then answer instead of taking a message.
- 7 **Get your business number,** or point the number your customers already dial at RAIMVOICE. The app gives you the exact forwarding code for your carrier and then places a real test call to prove it worked.
- 8 **Meet Eve and Adam.** Choose who answers, hear them, and place a live test call to your own phone.

WORTH DOING PROPERLY

The quality of your AI is almost entirely decided by steps 4 and 6. An agent with your real prices and your real policies sounds like your best receptionist. An agent without them sounds like a polite stranger taking messages.

3 • Today

The screen to open with your first coffee. What happened overnight, what needs you, and what is coming.

Today on iPhone — calls answered, the week so far, and anything waiting on you.

- **Calls today** with confirmation that your agents are live on your number, and when the last call came in.
- **This week** — calls in and out, upcoming appointments, and texts waiting on a reply from you.
- **Needs you** — the short list that actually requires a human. Usually a text to approve, or a question your AI could not answer.
- **Coming up** — the next appointments your agents booked.
- **Quick actions** — make a call, send a text, book someone in, add a customer.

IF A NUMBER LOOKS WRONG

Pull down to refresh. RAIMVOICE shows you what the server actually knows — if something has not arrived yet, it says so rather than showing you a stale figure as if it were current.

4 • Voice — your phone line

Everything about the line: who answers, how they sound, who gets rung, and every call that has ever come in.

Choose who answers, hear how they sound, and review every call.

Eve and Adam

Two agents with different voices and manners. Pick whoever suits your business, set their delivery — warm, upbeat, calm, professional or playful — and hear them before any customer does.

Every call, kept

Each call gives you who rang, what they wanted, what the agent did about it, a full transcript, and any revenue attached to it. **Calls are transcribed, not audio-recorded**, and every caller is told so at the start.

Talk to Ovia AI yourself

Hold a live spoken conversation with your own assistant — ask about your week, your numbers, what needs attention. It is the same voice technology your customers hear, so it doubles as a rehearsal.

When a call reaches voicemail

When your AI calls someone and gets their voicemail, you decide what happens: **leave a message**, **send a text instead**, **do both**, or **just log it**. A text is usually the better choice — voicemails go unheard, and a text can be replied to with one tap.

HONEST BY DESIGN

If you chose "send a text instead" and that customer has not agreed to receive texts, RAIMVOICE will *not* quietly leave a voicemail instead. It ends the call and tells you why, so you can fix it. A setting that silently does

something else is worse than one that fails and says so.

5 • Inbox — texts

Every text conversation in one place, with an AI draft ready when you want one — and nothing sent until you send it.

One thread per customer, with delivery status you can trust.

- **Draft with Ovia AI** writes a reply in your agent's voice. You read it, change it, and send it. It never sends on its own.
- **Quick replies** for the things you type twenty times a week.
- **Honest delivery.** If a carrier did not deliver a message, RAIMVOICE says so instead of showing it as sent.

LANDLINES

If you try to text a landline, RAIMVOICE tells you it is a landline and suggests calling instead. A landline can never receive a text, and sending one anyway just costs you money for silence.

6 • Calendar

The appointments your agents booked, and the ones you booked yourself, in one place.

Your agents book into your real availability — never over the top of it.

Book, reschedule, cancel, or mark an appointment completed or a no-show. Your agents check your working hours and your existing bookings before offering any time, so a customer is never promised a slot that does not exist.

Booking by hand takes a few seconds — your agents use exactly the same availability.

7 • Customers

Everyone who ever called, texted or booked — ordered by who is worth your attention now.

Every caller becomes a customer record automatically.

- Their full history — calls, texts and bookings together.
- **Notes and tags** you add, which your agents can then use.
- **No-show risk**, so you know when to ask for a deposit.
- **Do not contact**, per channel, honoured by every automated message.
- **Import from your phone** — you tick exactly who comes across; nothing is imported behind your back, and imported people are not signed up to anything.

8 • Settings

Everything your agents know and every rule they follow.

Settings, with the four themes at the top.

SETTING	WHAT IT CHANGES
Appearance	Four themes — White, Purple, Green, Blue. White is the default, and your choice stays on this device.
Business hours & escalation	When you are open, and who gets rung when a caller needs a person.
Hours & call routing	Whether the AI answers first, rings you first, or only answers outside your hours.
Voicemail	What happens when a call your AI places reaches voicemail.
Call language	The language your calls open in, including the legally required notices. During a call your AI already replies in whatever language the caller speaks.
Business knowledge	Everything your agents may say. The most valuable screen in the app.
Spam & blocked numbers	Screening, and numbers you never want to hear from.
Keep customers	Reminders, confirmations, review requests and follow-ups. Every one starts switched off.
Channels & connections	Your calendar and other services.
Privacy & consent	Consent records, data controls, and deleting your account.

Four themes. White is the default.

9 • Plans and usage

What each plan includes, what you have used, and what happens when you reach a limit.

Every plan includes both agents, your business number, calls, texts, bookings and Ovia AI. The plans differ in how much of each you get per month. **Settings > Plans & usage** shows what you have used so far, live.

NO SURPRISE BILLS

When you reach a limit, RAIMVOICE **stops and tells you**. It does not keep spending and invoice you afterwards. Plans are bought through the App Store or Google Play, so cancelling is one tap in your store account — there is no contract, no notice period and nobody to phone.

If something is refused because of your plan, the app says so plainly and takes you to the place to fix it. If a message says a limit was reached, that is genuinely what happened — it is never a polite cover for a fault on our side.

10 · Your data and your customers' privacy

You own what is in your workspace, and you can take it out or delete it whenever you like.

What you can do, from inside the app

- **Download everything** — calls, texts, customers, bookings, in a file you keep.
- **Delete by category**, or clear a whole category, with a typed confirmation so it cannot happen by accident.
- **Choose how long things are kept** — forever, or 30, 90 or 365 days, after which they are removed automatically.
- **Delete your account** — Settings › Privacy & consent › Delete account. It permanently erases your workspace and its data.

How your customers are protected

- Callers are told they are speaking with an AI, and that the call is transcribed. **Calls are not audio-recorded.**
- Automated texts only go to people who have agreed to receive them, and the record of that agreement is kept and exportable.
- STOP works, always and immediately.
- Do not contact is honoured per channel, so someone can keep getting appointment reminders while never receiving marketing.

PLEASE READ

RAIMVOICE is not for protected health information. If you are a medical, dental or veterinary practice, your agents can book and reschedule perfectly well — but do not put patient clinical detail into business knowledge or notes.

11 · When something looks wrong

WHAT YOU SEE	WHAT IT MEANS
"Texts aren't reaching customers"	Your texting registration has not cleared yet. Calls are unaffected. This is a carrier process and takes a couple of weeks.
A text shows as not delivered	The carrier rejected it. Usually a landline, a disconnected number, or someone who replied STOP.
"That's a landline"	Exactly what it says. Call them instead.
Calls are not arriving	Check forwarding in Settings > Your phone line and run the test call. It dials for real and tells you what happened.
Your agent said it would check with you	Working as intended — the answer was not in your business knowledge. Add it and it will answer next time.
Something blames our side	Then it <i>is</i> our side. RAIMVOICE does not blame your connection for our faults. Try again shortly, and contact support if it persists.

THE FASTEST FIX FOR MOST THINGS

Open **Settings > Business knowledge** and add what your agent did not know. Most "the AI got it wrong" moments are really "the AI was never told", and it is a two-minute fix that lasts forever.

12 · Getting help

- **In the app** — Settings › Help & FAQ answers the common questions without leaving RAIMVOICE.
- **What's new** — Settings › What's new lists what changed in each version.
- **Support** — raimovia.com/support/raimvoice
- **Privacy policy** — raimovia.com/legal/raimvoice/privacy
- **Terms** — raimovia.com/legal/raimvoice/terms
